

Robert Schroeder: „I am happy !“

Happy, because I can present you the CD version of the legendary **Galaxy Cygnus-A** now. And also I am happy, because this CD is a re-recording which sounds much better than the Original. But not different! **Galaxy Cygnus-A** is still **Galaxy Cygnus-A**, each tone and atmosphere is exactly copied, only the production sound is much more dynamic and clear.

Nothing of the composition is changed or lost, but there are something surprising and new additional. So for example the main theme is much more integrated in the whole work. Melodies from the first title are been included in other tracks too. This was also done in the Original version, but now it is much better worked out.

The treatment sounds equal, nothing from the authentic admission is lost, but it sounds all somewhat more fully, more approximately, more clearly. It is still an exciting adventure journey on the way to the far **Galaxy Cygnus-A**. A musically SF-history, which produces fantasy pictures with the listener.

For those who are not familiar with it: **Galaxy Cygnus-A** was already recorded and live performed in 1982 as contribution to the world well known **ARS Electronica** in Linz/Austria (with TV-transmission in Austria and FRG and a special transmission in "Aspekte") and published as LP on the IC label, at that time owned by Klaus Schulze.

Galaxy Cygnus-A was developed on the basis of received signals (acoustically white noise) from the 1.05 billion light-years removed radio galaxy Cygnus-A in the constellation swan. Caught and noted were these signals with the worldwide largest mobile radio telescope of the **Max-Planck-Institute** in Effelsberg (Eifel, FRG). These signals were the basic and inspiration for **Schroeders** galactic work - finest traditional electronic music.
